

Cement Mixing Bucket - Construction Machinery Attachment

This cement mixing bucket is a construction machinery attachment designed for mixing cement and other materials on-site. It features a robust construction with a heavy-duty mixing drum and a powerful hydraulic motor for efficient mixing.

Product Overview

Efficient On-Site Cement Mixing

This cement mixing bucket is a versatile construction machinery attachment designed for high-efficiency mixing and distribution of cement materials. Engineered for compatibility with skid steer and compact track loaders, it offers a compact footprint ideal for narrow job sites and specialized environments. The robust design ensures thorough material blending while minimizing environmental impact and reducing manual labor requirements.

Technical Specifications

Compatibility & Design

- Designed for skid steer and compact track loaders
- Compact design for narrow environment operation
- Includes discharge chute for controlled dispensing
- Heavy-duty mixing drum construction

Performance Highlights

1 High

Mixing Efficiency

1 Optimized

Waste Reduction

Operational Advantages

High Sealing Efficiency, Low Environmental Pollution, Safe Operation, Flexible Installation, Easy Maneuverability

Certifications & Standards

Certifications

CE Certified • UKAS Registered
