

Centerless Peeling Lathe for Wire and Bar

This centerless peeling lathe is designed for processing wire and bar materials. It efficiently straightens and peels the material to prepare it for subsequent operations.

Overview

High-Precision Peeling and Straightening Solutions

This centerless peeling lathe is engineered for the precise processing of steel bars and wire. Built upon proven international design standards, the machine delivers world-class results in material surface quality and dimensional accuracy. It serves as a reliable solution for industrial metalworking applications requiring consistent, high-performance output.

Machine Models

Available Peeling Lathe Models

- BP-40
- BP-80
- BP-150
- WC-250

Available Straightening Calender Models

- JP-15
- JP-50
- JP-80
- JP-150

Key Features

Quality Certification

World-Class Quality • Proven Innovation

Primary Capabilities

Steel Bar Peeling, Centerless Processing, High-Precision Straightening, Industrial Metalworking
