

Central Air Conditioning System with Ceiling-Mounted Indoor Unit

This air conditioning system is designed for centralized climate control. It includes an indoor unit for recessed ceiling installation and an outdoor compressor unit with a large heat exchange fan.

Product Overview

Central Climate Control Solution

This central air conditioning system is designed for professional climate management in residential or commercial environments. It features a streamlined, ceiling-mounted indoor unit optimized for recessed installation, ensuring a discreet and aesthetically pleasing integration into ceiling grids. The system is paired with a high-performance outdoor compressor unit engineered for efficient heat exchange and reliable operation.

Technical Details

System Components

- Indoor ceiling-mounted unit
- Outdoor compressor unit

Installation Style	Ceiling-mounted, recessed
Suitable Applications	Residential, Commercial
