

Central Air Conditioning Unit

This central air conditioning unit is designed for efficient cooling and air distribution. It provides reliable temperature control and air quality management in residential or commercial applications.

Product Overview

Efficient Cooling Solution

This central air conditioning unit is engineered for superior cooling performance and consistent air distribution. Its compact, durable housing allows for versatile installation in diverse residential and commercial settings. The unit utilizes a high-efficiency finned coil system to ensure reliable temperature management and improved air quality.

Suitable Applications

Residential, Commercial

Technical Specifications

Housing Durability

Durable Construction • Compact Design

System Compatibility

- Water line connections
- Refrigerant line connections

Heat Exchange

Finned coil system
