Product Overview

Professional Heating System Solution

This pre-assembled filling loop is designed to pressurize sealed central heating systems efficiently. Featuring a flexible braided hose, a non-return valve, and an isolating valve, it ensures reliable water supply management for domestic and light commercial applications. Its robust brass construction provides durability, while the integrated non-return valve protects the mains water supply by preventing backflow.

Technical Specifications

Integrated Components

- Flexible braided hose
- Non-return valve
- Isolating valve

Pipe Size	15 mm
Product Code	Y00116
Construction Materials	Brass, Flexible Braided Hose

Application & Usage

Suitable For

Domestic Heating • Light Commercial

Primary Function	System pressurization and backflow prevention
