

Centrifugal Atomization Cooling Fan

This is a centrifugal atomization fan designed for cooling purposes. It utilizes centrifugal force to atomize water into fine particles, facilitating efficient evaporation and cooling.

Product Overview

Centrifugal Atomization Cooling Fan

This centrifugal atomization cooling fan is designed to provide efficient cooling solutions for various environments. Utilizing advanced atomization technology, it ensures effective temperature reduction and air circulation. Its compact design and versatile voltage compatibility make it a reliable choice for professional cooling applications.

Technical Specifications

Model Number	401
Rated Voltage	110/220V AC
Fan Type	Centrifugal Atomization
