

Centrifugal Blower for Refrigeration and Ventilation

This centrifugal blower is designed for refrigeration and ventilation applications. It features a robust construction with a durable housing and a dynamically balanced impeller for smooth and efficient operation.

Product Overview

High-Efficiency Centrifugal Blower

This industrial-grade centrifugal blower is engineered specifically for demanding refrigeration and ventilation applications. It features a robust housing and a dynamically balanced impeller, ensuring smooth, vibration-free operation and high static pressure performance. Its compact, space-saving design is built for reliable, long-term service in challenging industrial environments.

Key Metrics

Performance Highlights

1 Centrifugal

Operation Type

Features

Technical Advantages

- Robust durable housing construction
- Dynamically balanced impeller for efficiency
- High static pressure capability
- Compact design for easy system integration
- Engineered for industrial longevity

Application

Suitable Applications

Refrigeration Systems, Ventilation Systems, Industrial Cooling, Air Circulation
