

Centrifugal Clutch Assembly for Small Engines

This centrifugal clutch assembly is designed for small engines. It features a durable metal construction with multiple weights and springs, along with a drive pulley and driven clutch component, suitable for go-karts and mini-bikes.

Product Overview

High-Performance Centrifugal Clutch Assembly

This centrifugal clutch assembly is engineered specifically for small engines, providing reliable power transmission for recreational vehicles. Constructed with robust metal components, it features a precision-balanced system of weights and springs to ensure smooth engagement. Designed for durability and consistent performance, this assembly is an ideal solution for go-karts, mini-bikes, and similar small-engine applications.

Technical Specifications

Included Components

- Drive Pulley
- Driven Clutch Component
- Engagement Weights
- Engagement Springs

Construction Material

Robust Metal

Compatible Vehicles

Go-karts, Mini-bikes, Recreational Vehicles
