

Centrifugal Clutch Assembly for Small Engines

This centrifugal clutch assembly is designed for small engines. It is used in applications requiring automatic engagement and disengagement based on engine speed, such as go-karts and mini-bikes.

Overview

High-Performance Centrifugal Clutch Assembly

This centrifugal clutch assembly is engineered for small engines, providing reliable automatic engagement and disengagement based on engine speed. Designed for durability and smooth operation, it includes a robust drum, precision shoes, springs, and a central hub. It is an ideal solution for original equipment manufacturers and aftermarket applications in go-karts, mini-bikes, and various small-vehicle platforms.

Technical Specifications

Assembly Components

- Clutch Drum
- Clutch Shoes
- Engagement Springs
- Central Hub

Engagement Mechanism

Automatic

Model Series

ML-1,2,3

Common Applications

Go-karts, Mini-bikes, Small Engines
