

Centrifugal Fan for HVAC and Ventilation

The SYT SERIES represents a line of robust centrifugal fans designed for a variety of HVAC and ventilation applications. These fans feature a durable construction with a galvanized steel housing and a dynamically balanced impeller to ensure smooth and efficient operation.

Product Overview

Professional HVAC Centrifugal Fans

The SYT series represents a line of robust centrifugal fans designed for a variety of HVAC and ventilation applications. These fans feature a durable construction with a galvanized steel housing and a dynamically balanced impeller to ensure smooth and efficient operation. Engineered for reliable performance, these units are suitable for fan coil systems, general ventilation, roof ventilation, and draft fan setups.

Performance Metrics

Airflow Range

1000 m³/h
Min Airflow

50000 m³/h
Max Airflow

Maximum Pressure

800 Pa

Technical Specifications

Drive Type

Belt Driven

Impeller Diameter

7-30 inch

Design Characteristics

Double Inlet, Forward Curved, Galvanized Steel Housing, Dynamically Balanced

Applications

Common Applications

- Fan coil units
- General ventilation systems
- Roof ventilation
- Draft fans
- Mechanically controlled ventilation
