

Centrifugal Fan Impeller

This blue plastic centrifugal fan impeller is designed for air movement applications. It features a radial blade design with curved blades arranged around a central hub with circular openings.

Product Overview

High-Efficiency Centrifugal Fan Impeller

This centrifugal fan impeller is engineered for reliable air movement in ventilation and HVAC systems. Featuring a robust radial blade design with curved vanes, it ensures consistent airflow and pressure performance. The durable plastic construction makes it an ideal component for various blower applications where efficient air circulation is required.

Physical Characteristics

Applications

Typical Applications

- HVAC Systems
- Air Ventilation Equipment
- Industrial Blowers
