

# Centrifugal Fan Impeller Blower Wheel

This centrifugal fan impeller blower wheel is designed for efficient air movement in various applications. The radial blade design ensures optimal airflow and pressure.

## Product Overview

### High-Efficiency Air Movement

This centrifugal fan impeller blower wheel is engineered for efficient air circulation across diverse industrial and commercial environments. Featuring a radial blade design, it delivers optimal airflow and consistent pressure performance. Its durable plastic construction provides an ideal balance of structural strength and lightweight operation, making it a reliable component for HVAC systems and electronics cooling solutions.

## Technical Specifications

Material	Durable Plastic
Blade Design	Radial
Installation Features	Central Hub, Motor Shaft Mount

## Applications

### Recommended Applications

- HVAC Systems
- Electronics Cooling
- Industrial Air Circulation
- Commercial Ventilation
