

Centrifugal Fan Impeller for Air Conditioning Units

This centrifugal fan impeller is designed for use in air conditioning units. Its robust construction features multiple curved blades to ensure efficient airflow and balanced operation.

Product Overview

High-Efficiency Centrifugal Impeller

This centrifugal fan impeller is specifically engineered for high-performance air conditioning units. It features a robust construction with precision-curved blades designed to maximize airflow efficiency and cooling performance. Each unit is dynamically balanced to ensure smooth, quiet operation and significantly reduced vibration during extended use.

Technical Specifications

Component Type	Centrifugal Fan Impeller
Primary Application	Air Conditioning Units
Mounting Type	Central Hub Mounting

Performance Features

Key Benefits	Efficient Airflow, Vibration Reduction, Balanced Operation, Robust Construction
