

Centrifugal Fan Impeller for HVAC Systems

This centrifugal fan impeller is designed for industrial applications such as HVAC and ventilation. Its robust construction and curved blades ensure efficient airflow.

Product Overview

Industrial Centrifugal Impeller

This high-performance centrifugal fan impeller is engineered for demanding industrial ventilation and HVAC applications. Featuring a robust design with precision-curved blades, it ensures optimal airflow efficiency and consistent air movement. The unit is constructed from durable, high-strength materials such as aluminum or steel, making it suitable for heavy-duty operating environments.

Mechanical Specifications

Blade Design	Curved blades for high-efficiency airflow
Drive Configuration	Direct drive

Application Suitability

Industries	HVAC, Industrial Ventilation, Air Movement Machinery
