

Centrifugal Fan Impeller for Ventilation

Centrifugal fan impeller designed for electrical fans and exhaust systems. It features a radial blade configuration for efficient airflow and is constructed from durable metal.

Product Overview

Centrifugal Fan Impeller

This centrifugal fan impeller is engineered specifically for high-performance ventilation and exhaust systems. Featuring a robust radial blade configuration, it ensures efficient airflow and consistent air movement. Constructed from durable metal, this component is built for longevity and reliability in various air conditioning and ventilation applications.

Technical Specifications

Blade Configuration	Radial
Material	Durable Metal
Suitable Applications	Ventilation Systems, Exhaust Systems, Air Conditioning Equipment
