

Centrifugal Fan Impeller

This tan-colored centrifugal fan impeller features multiple curved blades arranged radially around a central hub. Optimized for efficient air movement, it is suitable for HVAC systems and similar applications.

Overview

High-Efficiency Air Movement

This centrifugal fan impeller is engineered for optimal airflow performance in HVAC systems and similar industrial ventilation applications. Featuring a robust design with radially arranged curved blades, it ensures efficient air displacement and reliable operation. The unit includes a central hub with an integrated bearing, facilitating seamless mounting onto motor shafts for immediate integration into your ventilation equipment.

Technical Specifications

Blade Design	Curved blades arranged radially
Material	Plastic
Mounting	Central hub with integrated bearing

Applications

Primary Applications	HVAC Systems, Ventilation, Air Handling
