

Centrifugal Pump for Water Transfer

This centrifugal pump is designed for water transfer, boosting, and circulation. It features stainless steel components for corrosion resistance and reliable performance.

Overview

High-Performance HCT-S Centrifugal Pump

The HCT-S series centrifugal pump is engineered for demanding water transfer, boosting, and circulation tasks. Built with robust stainless steel components, this unit offers exceptional corrosion resistance and long-term durability. It is an ideal solution for industrial, agricultural, and municipal water systems requiring efficient and reliable operation.

Key Features

Suitable Applications

- Industrial Water Systems
- Agricultural Irrigation
- Municipal Water Supply
- Water Boosting
- Circulation Systems

Construction Materials

Stainless Steel
