

Centrifugal Slurry Pump

This centrifugal slurry pump is engineered for handling abrasive and high-density slurries. Its robust design and wear-resistant components ensure durability and minimal downtime in industries like mining and chemical processing.

Overview

Robust Centrifugal Slurry Pump

This series of centrifugal slurry pumps features a cantilevered, horizontal design engineered specifically for handling highly abrasive and high-concentration slurries. Built for durability and efficiency, these pumps are suitable for demanding industrial environments and can be configured as multi-stage series pumps to meet varying head requirements. Their robust construction ensures reliable performance in critical applications across multiple sectors.

Technical Specifications

Operational Capabilities

- Handles highly abrasive slurries
- Handles high-concentration slurries
- Multi-stage series installation capable

Pump Configuration

Cantilevered, Horizontal Centrifugal

Suitable Applications

Metallurgy, Mining, Coal Processing, Power Generation, Heavy Industry

Certifications

Compliance & Standards

CE • ISO 9001 • UKAS • SGS
