

Centrifugal Slurry Pump

This centrifugal slurry pump is designed for heavy-duty slurry applications. Its durable construction and wear-resistant materials ensure long service life and efficient solids handling.

Product Overview

Heavy-Duty Centrifugal Slurry Pump

This series of cantilevered, horizontal centrifugal slurry pumps is engineered for handling highly abrasive, high-concentration slurries. Designed for durability and efficiency, the pump features a robust construction suitable for demanding industrial environments. The modular design supports multi-stage series installation, ensuring flexibility and reliability across mining, metallurgy, and power generation applications.

Technical Specifications

Design Features

- Cantilevered design
- Horizontal orientation
- Modular construction
- Wear-resistant components
- Multi-stage series capability

Pump Type

Horizontal Centrifugal Slurry Pump

Certifications & Standards

Certifications

CE, ISO 9001, UKAS, SGS Certified, Environmental Management Certified

Applications

Primary Applications

- Metallurgy industry
- Mining industry
- Coal processing
- Power generation
- Mineral processing
- Dredging
