

# Centrifugal Slurry Pump for Abrasive Materials

This slurry pump is designed for handling abrasive, high-density slurries, and low-density, high-head slurries. It is suitable for use in metallurgy, mining, coal, power, building materials, and other industrial applications.

## Overview

### Heavy-Duty Slurry Pumping Solution

The 12/10ST-H centrifugal slurry pump is engineered for continuous, reliable operation in the most demanding industrial environments. Designed to handle highly abrasive and high-density slurries, this pump is ideal for applications in mining, metallurgy, coal, and power generation. Its robust construction ensures long service life, while the design allows for multi-stage series installation to meet specific pressure and transport requirements.

## Performance Metrics

### Max Flow Rate

**550 L/sec**

Max Flow

### Max Head

**68 Meters**

Max Head

## Technical Specifications

Suction Size	12 inch
Discharge Size	10 inch
Dimensions (LxWxH)	1816 x 1510 x 1324 mm

## Materials & Application

### Target Industries

- Metallurgy
- Mining
- Coal
- Power Generation
- Building Materials

Liner Material	High Chrome, Rubber
