

Centrifugal Water Circulation Pump

This centrifugal pump is designed for efficient water circulation in various applications. It features a robust construction with a durable motor, ensuring reliable performance and longevity.

Product Overview

High-Efficiency Circulation Pump

The 2YCM series centrifugal pump is engineered for reliable and efficient water circulation across diverse applications. Featuring robust construction and a durable motor, this pump delivers consistent hydraulic performance, flow rates, and pressure. It is an ideal solution for demanding environments including HVAC systems, industrial processes, and agricultural irrigation.

Technical Specifications

Model Number	2YCM25-130
Key Features	Efficient Circulation, Robust Construction, Durable Motor, Optimal Hydraulic Performance

Applications

Suitable Applications

- HVAC Systems
- Industrial Processes
- Agricultural Irrigation
