

Centrifugal Water Pressure Booster Pump

This centrifugal water pump is typically used for boosting water pressure in residential or light commercial applications. It features a robust electric motor with a protective enclosure and a cast iron pump body for durability.

Product Overview

High-Efficiency Pressure Boosting

This centrifugal water pressure booster pump is engineered for reliable performance in both residential and light commercial water systems. Featuring a durable cast iron body and a robust electric motor, it ensures long-lasting operation and efficient water transfer. Its design includes standard threaded inlet and outlet ports, making it straightforward to integrate into existing plumbing configurations for enhanced water pressure.

Technical Specifications

Motor Enclosure

Protective Enclosure

Pump Type

Centrifugal

Body Material

Cast Iron

Primary Applications

Residential, Light Commercial, Water Pressure Boosting

Connection Ports

Threaded Inlet and Outlet
