

Centrifugal Water Pump

This centrifugal water pump is designed for water circulation, pressure boosting, and general water transfer. Its robust construction ensures durability and suitability for clean water and non-aggressive fluids.

Overview

CPM Series Centrifugal Pump

The CPM series centrifugal pump is engineered for versatility, serving essential needs in water circulation, pressure boosting, and general water transfer. Its robust construction ensures long-term durability, while the high-efficiency motor provides reliable performance for clean water and non-aggressive fluid applications. Designed with a compact footprint, this pump is easy to install and serves as an ideal solution for domestic, agricultural, and industrial environments.

Applications

Compatible Fluids

- Clean water
- Non-aggressive fluids

Suitable Environments

Domestic, Agricultural, Industrial

Technical Features

Key Features

High-efficiency motor • Compact design • Easy installation • Robust construction

Primary Functions

- Water circulation
- Pressure boosting
- General water transfer
