

Centrifugal Water Pump

This centrifugal pump efficiently moves fluids using rotational energy. It is suitable for various industrial applications requiring consistent fluid transfer.

Overview

Precision Centrifugal Pump Component

This precision-engineered component is designed for integration into centrifugal water pump assemblies. Crafted from durable metal, it features a cylindrical body with a flanged end and a specific collar design, ensuring tight tolerances for reliable operation. It serves as a critical shaft or pin element within the pump mechanism, supporting consistent hydraulic performance.

Technical Specifications

Component Type	Pump Shaft / Pin
Material	Industrial Grade Metal
Key Design Features	Flanged End, Precision Machined, Integrated Collar
