

Centrifugal Water Pump

High-performance centrifugal water pump designed for efficient water transfer and circulation. Features a robust motor for reliable operation and a durable pump housing for long-lasting performance.

Overview

High-Performance Centrifugal Pump

The SCP158 is a high-performance centrifugal water pump engineered for efficient water transfer and circulation. Built with a robust motor and a durable housing, it ensures reliable, long-lasting operation in demanding environments. This versatile unit is perfectly suited for irrigation, municipal water supply, and various industrial process applications.

Technical Specifications

Model Number	SCP158
Suitable Applications	Irrigation, Water Supply, Industrial Processes, Water Circulation

Performance

Key Performance Metrics

158

Model Series

Construction

Key Features

- Robust motor for reliable operation
- Durable pump housing
- Consistent flow delivery
- Optimized pressure performance
