

# Centrifugal Water Pump for Circulation and Boosting

This centrifugal pump is designed for efficient water circulation and boosting in various applications. Its durable construction ensures reliable performance and longevity.

## Product Overview

### Versatile Centrifugal Circulation Pump

The SCM series centrifugal pump is engineered for high-efficiency water circulation and pressure boosting. Built with durable, corrosion-resistant components, it ensures consistent hydraulic performance across residential and light industrial applications. Its compact form factor facilitates easy installation, while the robust motor provides quiet, energy-efficient, and reliable operation.

## Technical Specifications

Model Identifier	SCM-50
Suitable Applications	Water Circulation, Pressure Boosting, Irrigation Systems, Water Supply

## Performance

Operational Noise	Low noise operation
-------------------	---------------------

## Build Quality

### Key Design Benefits

- Compact design for confined spaces
- Corrosion-resistant components
- Robust motor construction
- Energy-efficient architecture
