

Centrifugal Water Pump for Fluid Transfer

This centrifugal water pump is designed for efficient fluid transfer. The pump consists of an electric motor coupled to a pump housing with a volute casing, suction, and discharge flanges.

Product Overview

Industrial Fluid Transfer Solution

This centrifugal water pump is engineered for robust industrial and agricultural fluid transfer applications. It features a reliable electric motor coupled directly to a heavy-duty pump housing, ensuring consistent performance under demanding conditions. Mounted on a sturdy base, the unit provides enhanced stability and efficient water movement through its precision-engineered volute casing.

Technical Specifications

Key Components

- Electric motor drive
- Centrifugal pump housing
- Coupled shaft assembly
- Volute casing
- Mounting base

Design Features

Industrial Grade • Stable Base • High Efficiency

Connections

Suction Flange, Discharge Flange
