

Centrifugal Water Pump for Industrial Applications

This high-performance centrifugal water pump is designed for industrial and commercial applications. The stainless steel components ensure durability and corrosion resistance, providing efficient water transfer and pressure boosting.

Overview

High-Performance Centrifugal Pump

The EQ-DHF is a high-performance centrifugal water pump engineered specifically for demanding industrial and commercial environments. Built with durable stainless steel components, it offers superior corrosion resistance and long-term reliability for critical fluid handling tasks. This unit integrates advanced control systems for precise operation, making it an ideal solution for pressure boosting and water supply infrastructure.

Applications

Primary Applications

Pressure boosting systems, Water supply systems, Sprinkling, Cooling systems, Industrial washing systems

Technical Features

Integrated Monitoring

1 Active

Flow Monitoring

1 Active

Pressure Control

Material Composition

Stainless steel

Control System

Yes
