

Centrifugal Water Pump for Industrial Applications

This centrifugal water pump is suitable for industrial and agricultural applications. It features a cast iron pump housing, flange connection, and direct coupling to an electric motor.

Overview

Industrial Centrifugal Pump

This industrial-grade centrifugal water pump is designed for high-performance fluid transport in demanding industrial and agricultural environments. Built with a robust cast iron housing, it ensures long-term durability and resistance to operational stresses. The unit features a direct-coupled electric motor configuration, optimized for efficient flow rates and reliable head pressure in large-scale piping systems.

Technical Specifications

Housing Material	Cast Iron
Connection Type	Flange connection
Drive System	Direct-coupled electric motor

Features

Suitable Applications

- Industrial fluid transport
- Agricultural irrigation
- Piping system integration

Mounting Features

Sturdy base, Vibration dampening, Industrial integration
