

Centrifugal Water Pump for Irrigation

This centrifugal water pump is engineered for high-volume water transfer, irrigation, and drainage systems. Its durable cast iron construction offers excellent resistance to corrosion and wear.

Product Overview

High-Efficiency Centrifugal Pump

The AM104 is a robust centrifugal water pump engineered for demanding agricultural and industrial water transfer needs. Constructed from durable cast iron, this unit provides exceptional resistance to wear and corrosion, ensuring long-term reliability. Its precision-machined internal components, including the impeller and volute, deliver optimal hydraulic efficiency for irrigation, drainage, and large-volume fluid management.

Technical Specifications

Design Advantages

- Precision-machined impeller
- High-efficiency volute design
- Compact footprint for easy installation
- Corrosion-resistant construction

Housing Material	Cast Iron
Primary Applications	Agricultural Irrigation, Industrial Water Transfer, Drainage Systems
