

Centrifugal Water Pump for Irrigation and Water Supply

This centrifugal water pump is designed for domestic water supply, irrigation, and various industrial processes. Its durable construction includes a cast iron pump body and impeller, ensuring resistance to corrosion and long-lasting performance.

Product Overview

Robust Centrifugal Water Pump

The CPM-146 is a versatile centrifugal water pump engineered for reliable performance in domestic water supply, agricultural irrigation, and industrial applications. Built with a durable cast iron pump body and impeller, this unit is designed to resist corrosion and ensure long-term operational stability. It features a high-efficiency, totally enclosed fan-cooled (TEFC) motor that protects against dust and water ingress, while built-in thermal overload protection safeguards the system against overheating.

Technical Specifications

Motor Type	TEFC (Totally Enclosed Fan Cooled)
Body Material	Cast Iron
Impeller Material	Cast Iron
Safety Features	Thermal Overload Protection, TEFC Motor Protection

Key Features

Performance Highlights

- High efficiency hydraulic design
- Low noise operation
- Compact footprint for easy installation
- Reliable performance under varied conditions
