

Centrifugal Water Pump for Water Transfer

The DK series centrifugal water pump is designed for efficient water transfer in various applications. This self-priming pump features a robust construction with a cast iron pump body and impeller for durability and long-lasting performance.

Product Overview

DK Series Centrifugal Water Pump

The DK series centrifugal water pump is engineered for efficient water transfer across a wide range of applications, including domestic water supply, irrigation, and industrial use. Featuring a robust cast iron pump body and impeller, this self-priming pump ensures long-lasting durability and reliable performance. Powered by a high-efficiency electric motor, the system is designed to minimize energy consumption while delivering excellent flow rates and head pressures.

Technical Specifications

Key Features

Self-priming • High-efficiency Motor • Durable Construction

Pump Type	Self-priming Centrifugal Pump
Material	Cast Iron Body, Cast Iron Impeller

Applications

Suitable Applications

- Domestic water supply
- Irrigation systems
- Industrial water transfer
