

Centrifugal Water Pump Set

This centrifugal water pump set is designed for efficient water transfer and circulation in industrial applications. Its robust construction ensures reliable performance and a long service life.

ADDITIONAL IMAGES

Product Overview

Engineered for high-volume water transfer and reliable performance.

Industrial Centrifugal Water Pump

The RT125-315-4100 is a robust centrifugal water pump set engineered for high-volume liquid transfer in demanding industrial environments. Designed for efficiency and long-term reliability, it features a durable construction, an optimized hydraulic impeller, and a stable base frame for easy installation. This versatile pump is ideal for irrigation, water treatment, dewatering, and general industrial water supply applications.

Technical Specifications

Professional grade construction for efficient fluid transfer.

Performance Data

Flow (m ³ /h)	Head (m)	Speed (r/min)	Efficiency (%)	Shaft Power (kW)
15	21.8	2900	58	1.54
25	20	2900	58	1.54

Compatible Motor Y100L-2/3

Required NPSH 2 m

Features

Optimized hydraulic design suitable for continuous industrial operation.

Design Features

- Optimized impeller design
- Volute casing for smooth flow
- Mechanical seal for leak-free operation
- Robust base frame for vibration reduction

Primary Applications Irrigation, Dewatering, Water Supply, Industrial Processes, Water Treatment
