

Centrifugal Water Pump with Induction Motor

This centrifugal water pump is designed for efficient water circulation. It is equipped with a two-pole induction motor, thermal protector, and IP44 protection.

Product Overview

Reliable Centrifugal Water Pump

This centrifugal water pump, powered by an induction motor, is engineered for efficient water circulation in domestic, civil, and light industrial applications. It is constructed with a durable cast iron pump body, ensuring long-term reliability for tasks such as water distribution, pressure set integration, and garden irrigation. Designed for clean water handling, this unit combines ease of use with robust performance.

Technical Specifications

Pump Type	Centrifugal
Motor Type	Induction Motor
Pump Body Material	Cast Iron
Installation	Enclosed environment, Sheltered from weather

Application & Usage

Suitable Fluids

- Clean water
- Non-chemically aggressive liquids

Primary Applications

Domestic water distribution • Civil applications • Pressure sets • Garden irrigation

Design Features

Key Design Features

- Threaded inlet and outlet ports
- Protective motor cover
- Integrated cooling fan
- Sturdy mounting feet
