

# Centrifugal Water Pump with Stainless Steel Housing

This centrifugal pump is designed for water transfer and boosting. It features a stainless steel housing for corrosion resistance and durability.

## Overview

### High-Performance Centrifugal Pump

This centrifugal water pump is engineered for demanding water transfer and boosting applications. Featuring a durable stainless steel housing, it offers excellent corrosion resistance and long-lasting operational reliability. Equipped with a robust electric motor, this unit is designed to provide consistent flow and pressure for various industrial, agricultural, and domestic water supply needs.

## Technical Specifications

### Primary Function

Water Transfer • Boosting

### Key Features

- Corrosion-resistant stainless steel housing
- Robust electric motor
- Consistent flow and pressure delivery

<b>Housing Material</b>	Stainless Steel
<b>Suitable Applications</b>	Industrial, Agricultural, Domestic
