

Ceramic Brick Forming Mold

Hard alloy molds designed for creating ceramic floor and wall bricks. Their durable construction ensures consistent dimensions and a high-quality surface finish on the bricks.

Product Overview

High-Performance Ceramic Brick Forming Molds

These hard alloy molds are precision-engineered specifically for the production of ceramic floor and wall bricks. Built to withstand the rigors of high-volume industrial manufacturing, they ensure consistent dimensions and a superior surface finish for every piece. Their durable construction offers excellent resistance to wear and tear, significantly extending the operational lifespan in demanding environments.

Technical Specifications

Material	Hard Alloy
Suitable Applications	Ceramic Floor Bricks, Wall Bricks, High-Volume Manufacturing

Performance Features

Key Operational Benefits

- High wear resistance
- Consistent dimensional accuracy
- Superior surface finish quality
- Extended operational lifespan
