

Ceramic Grinding Wheels for Industrial Use

Ceramic grinding wheels are designed for industrial grinding and finishing tasks. They are available in various shapes and sizes, suitable for different materials and applications.

Product Overview

Industrial Ceramic Grinding Solutions

These high-performance ceramic grinding wheels are engineered for demanding industrial grinding and finishing operations. Designed to deliver precision and consistency, the product line includes a versatile range of geometries such as double recess, taper, dish, flaring cup, and straight cup configurations. This variety ensures optimal performance across diverse material processing applications, making them a reliable choice for professional machining environments.

Configuration Options

Available Shapes

- Double recess & taper wheels
- Dish wheels
- Flaring cup wheels
- Straight cup wheels
