

Cereal Grain Cleaning and Separating Machine

This high-efficiency cereal processing machine is designed for separating and cleaning grains. It features a robust frame, multiple separation stages, adjustable settings, and an integrated dust collection system, making it suitable for large-scale food and beverage production.

Product Overview

High-Efficiency Grain Processing

This high-efficiency cereal processing machinery is engineered specifically for the thorough cleaning and separation of grains. Featuring a robust frame and multiple separation stages, it ensures optimal purity for large-scale food and beverage production facilities. The system is designed for versatility, incorporating adjustable settings that accommodate various grain types and an integrated dust collection system to maintain operational cleanliness.

Technical Specifications

Separation Stages	3 stages
Dust Collection System	Yes
Adjustable Settings	Adjustable for multiple grain types, Variable settings

Application

Target Industry
Food Production • Beverage Production • Large-scale Facilities

Construction

Frame Construction	Robust heavy-duty frame
