

CFC-11 Alternative Transformation Project

This project involves a 55 million yuan investment. It is enforced by the energy and environment engineering department.

Project Overview

CFC-11 Alternative Transformation Project

This international environmental protection initiative focuses on the industrial reconstruction of CFC-11 alternatives to meet global environmental standards. Successfully implemented through comprehensive engineering design, procurement, construction, and commissioning, the facility ensures high environmental performance. The project represents a significant industrial investment, officially entering production following comprehensive acceptance in April 2005.

Total Project Investment

55 million RMB

Investment Amount

Execution Details

Service Scope

- Engineering design
- Procurement
- Construction
- Commissioning
- Operational training

Completion Date

April 2005

Standards and Certification

Project Classification

International Environmental Protection, CFC-11 Alternative, Montreal Multilateral Fund
