

Check Valve

This check valve prevents reverse flow in pipelines and systems. It allows flow in one direction and automatically prevents backflow when the flow reverses.

Product Overview

Fire Alarm Starter Control Panel

This manual and automatic starter control panel is engineered specifically for fire alarm and safety systems. It features a robust red enclosure suitable for wall mounting, ensuring high visibility and durability in emergency environments. With intuitive key-operated switches and clear status indicators, it provides reliable control for fire, emergency parking, and manual operation modes.
