

Check Valve

This check valve allows flow in a single direction. It prevents backflow in compatible systems.

Product Overview

Check Valve CW8044

The CW8044 is a precision-engineered check valve designed for reliable fluid control applications. Built to ensure unidirectional flow, this component is essential for preventing backflow in piping systems. Its robust construction makes it a suitable choice for demanding industrial environments where durability and performance are critical.

Technical Details

Model Number	CW8044
Product Type	Check Valve
