

Chemical Processing Machinery

This machinery is used in chemical processing plants for various operations. It facilitates chemical reactions, separation, mixing, and other essential processes in chemical manufacturing.

Overview

All-Dielectric Central Tube Micro Cable

This advanced micro cable is engineered for high-performance optical communication networks, featuring an all-dielectric central tube design. It is constructed with precision to ensure structural integrity and signal reliability in demanding environments. The cable's non-metallic components and robust outer sheath provide excellent protection against environmental factors, making it an ideal solution for modern fiber optic infrastructure.

Construction Details

Cable Construction Components

- Outer Sheath
- Non-metallic components
- Loose tube
- Filling material
- Optical fibers

Design Type	All-dielectric central tube
Material Characteristics	Non-metallic, Dielectric
