

Chemical Storage Tank for Industrial Processing

This chemical storage tank is designed for large-scale industrial chemical processing. It features a robust metal construction suitable for outdoor environments and bulk material containment.

Overview

Industrial-Grade Chemical Storage Solution

This large-scale storage facility is engineered for the secure containment of bulk materials used in demanding chemical processing environments. Featuring a robust dome-shaped structure, the unit is built to withstand industrial rigors while maintaining structural integrity. It is designed to support high-capacity production lines, ensuring reliable storage for large-scale operations.

Technical Specifications

Supported Production Line Capacity

6000 t/d

Production Capacity

Structure Diameter	110 m
Construction Materials	Metal Sheeting, Steel Beams
Structure Design	Dome-shaped
