

Chemical Transfer Pump for Corrosive Fluids

This chemical transfer pump is designed for the efficient and reliable transfer of corrosive fluids. Its robust motor and impeller design ensures consistent flow rates and minimal maintenance for demanding industrial applications.

Product Overview

Industrial Corrosive Fluid Handling

This centrifugal pump is engineered for the efficient and reliable transfer of corrosive fluids in demanding industrial environments. Featuring a corrosion-resistant housing and a high-performance closed impeller, it delivers consistent flow rates and long-lasting durability. Its compact design ensures straightforward installation and minimal maintenance, making it a dependable solution for chemical processing and water treatment facilities.

Technical Specifications

Design Features

- Closed impeller design for optimal hydraulics
- Robust motor construction
- Compact footprint for easy integration
- Precision-engineered internal components

Pump Category

Centrifugal Pump

Construction Materials

Corrosion-resistant housing, High-grade chemical resistant components

Applications

Primary Use Cases

Chemical Processing • Water Treatment • Industrial Fluid Handling
