Product Overview

High-Reliability Safety Component

This quick-release buckle is engineered specifically for child safety belt systems, offering a reliable and durable solution for restraint applications. Constructed from a robust combination of high-quality black plastic and metal, it features an ergonomic design with a central red release button for rapid access. The buckle is designed for secure fastening and long-term performance, ensuring safety and convenience for professional restraint system assembly.

Technical Specifications

Model Identifiers

- FED035
- FED052

Materials

High-Quality Plastic, Metal

Fastening System

3-point quick release

Performance Features

Core Benefits

- Ergonomic red central release button
- Double-insert receiver design
- Robust construction for long service life
- Rapid release mechanism
