

Chrome-Plated Ball Valve with Lever Handle

This ball valve is a plumbing component designed for controlling the flow of fluids. It features a chrome-plated finish for durability and corrosion resistance.

Overview

Reliable Flow Control

This chrome-plated ball valve is a robust plumbing component engineered for precise fluid flow management. Featuring a durable chrome-plated finish, it offers excellent corrosion resistance for long-term reliability in various environments. The intuitive lever handle design ensures quick and easy on/off operation, making it an ideal choice for both industrial and commercial plumbing applications.

Technical Specifications

Connection Types

- Threaded Inlet
- Hose Connection Outlet

Surface Finish	Chrome-plated
Operation Type	Lever Handle
Key Features	Corrosion Resistant, Durable Finish, Easy Operation
