

Circle-Top Aluminum Radiator for Heat Dissipation

This high-efficiency aluminum radiator is designed for optimal heat dissipation. Its circle-top design enhances aesthetics and improves thermal performance.

Product Overview

High-Efficiency Thermal Solution

This circle-top aluminum radiator is engineered for superior heat dissipation in both residential and commercial heating environments. Constructed from a high-quality, durable aluminum alloy, it offers exceptional corrosion resistance and long-lasting reliability. Its unique design ensures consistent and efficient heat distribution, providing a comfortable indoor climate while maintaining an aesthetically pleasing profile.

Technical Specifications

Material	Aluminum Alloy
Design Style	Circle-top
Suitable Applications	Residential, Commercial

Performance

Key Performance Indicators

1 High

Heat Dissipation Efficiency

1 High

Corrosion Resistance
