

Circular Composite Component with Radial Fins

This is a precision-molded composite component with a circular design. It features radial fins extending from a central hub, designed for mounting.

Product Overview

Precision Circular Composite Component

This precision-molded circular composite component features integrated radial fins, designed for optimal performance in mechanical or electronic assemblies. Its unique geometry allows for seamless interaction with surrounding parts, making it an ideal choice for support or guidance roles. Engineered for durability and fit, the component includes a central hub for easy shaft mounting, ensuring high reliability in rotational or sliding applications.

Design Characteristics

Design Features	Circular Geometry, Radial Fins, Central Mounting Hub, Precision Molded
Component Category	Mechanical Support/Spacer

Application

Primary Applications

- Mechanical Equipment Support
- Electronic Equipment Guidance
- Shaft-mounted Assemblies
