

Circular Exhaust Fan Component

This is an electrical fan and exhaust fan component. It is designed for use in ventilation systems.

Product Overview

Precision Ventilation Component

This circular exhaust fan component is engineered for optimal airflow management in ventilation systems. Featuring a durable, reflective material construction, it includes a central aperture surrounded by a precision-engineered perforation pattern to balance structural integrity with efficient air passage. Designed for seamless integration, the raised outer rim ensures secure mounting within larger industrial or commercial exhaust assemblies.

Technical Specifications

Material Finish

Reflective • Metallic Appearance

Design Features

- Central mounting hole
- Perforated airflow pattern
- Raised outer rim for structural integrity

Geometry

Circular

Application

Ventilation Systems, Exhaust Assemblies, Airflow Management
