

Circular Knitting Machine for Fabric Production

This circular knitting machine is designed for high-speed production of knitted fabrics. It features a cylindrical needle bed and integrated control panel, suitable for producing a variety of knit structures.

Product Overview

High-Efficiency Circular Knitting

This circular knitting machine is engineered for high-speed production of premium knitted textiles. Featuring an advanced multi-feeder system and a precise cylindrical needle bed, it ensures consistent output for demanding industrial environments. The robust construction and integrated control panel allow for reliable performance across a wide range of fabric structures.

Technical Capabilities

Supported Structures	Single Jersey, Rib, Interlock
Machinery Category	Circular Knitting Machine

Key Features

Design Specifications

- Integrated digital control panel
- High-speed yarn feeder configuration
- Durable heavy-duty frame construction
- Precision cylindrical needle bed
